1

of the Otalgic state of fever.

I call it a state of fever, for it always attends it in a greater or less degree. It is a common disease in children. Now then it accompanies influenza, & all the forms of sore throat. It is sometimes excited by a salivation.

Remedies

1 U.S. - 2 prunes - 3 Blisters behind the ears. 4 Laudanum. 5 The Smoke of Sugar burnt on foals & conveyed into the ear by a funnel. ^{also of Tobacco} The Juice of the sweet sap of the birch is used by the Indians for this purpose. If it tends to a Suppuration, Cataplasms of bread & milk & boiled Onions are proper to the external ear. U

V Dr Hamilton of Linn Regis describes
an apsthus sore mouth in near the
sea shore which he calls Cancer Aggrations.
It is a form of ~~pus~~ & the fever which is
derived from marsh exhalation. Children
& women are most subject to it. In the
former it often destroys the fore teeth. The
Ulcers in the mouth are fetid, & discharge
a corrosive matter.

2
will generally prevent this termination,
as also the destruction of the membrana
Tympani, and deafness. -

The Apthous state of fever.

a sore throat and mouth is never a
primary disease when accompanied with
fever. It is the effect of an effort of
nature to relieve herself by depletion.
It sometimes attends Epidemicity. Dr
Groninger describes a fever of this kind in
Holland. In ^{often} children it is the effect of
general fever induced by the stimulus of
the retained mucus, or perhaps by the
common atmosphere. Now when it occurs
as ^{consump?} Dyspnoea & Diarrhoea,
in the close of chronic diseases in which
it is generally fatal. In Acute cases
it is favourable. I have seen one & read of

v The Catarrh of 1803 ended in a sore mouth
or low degree of Aphthae in many people.

Another in which it would be satisfactory. I have once known it terminate in laryngeal stridor in a child. ✓

Remedies

~~But~~ They sh^d be regulated by the pulse, season & reigning epidemic. 1. If the pulse be tense or full. 2. Purges. 3. Calomel if nature be incompetent to cleanse the mouth & throat. 4. Blisters. 5. Gargles of detergent liquors - as sage tea with honey & vinegar - Alum - sugar & hcl. 6. ~~Bark~~ — Dr. Hamilton commends very highly a little ^{of the muriatic} ~~Hydrochloric~~ acid in mel. Rosari^{to be} applied to the face. 6 Bark.

It is one of the Endemics of
Barbadoes where it has been ably descri-
bed by Dr Hardy by the name of the Glandu-

lar disease. ^{Dr Christman who questions it in}
^{his travels thrs the colonies in search of a proof of venereal}
^{it says} ~~It~~ ^{It} affects the glands of the throat - the groin,
the axilla - breasts - knees - testicles proas

muscles - eyes & ears externally, also the
mesenteric glands - ^{with Uterus & soft parts,} lungs, liver, bladder,
rectum, Uterus, & Ovaria internally. It
occasionally affects the teeth & all the bones
of the body. - it is then called Rickets
It is a very common disease in Eng.

of the Hydrophobic state of
fever.

You will find an account of this
state of fever in Ali besh, excellent
treatise upon fevers. ~~It appeared in one~~
~~or two cases of the yellow fever in 1793. I saw~~
~~that one case of it, and that was all~~
~~a case of it in~~
the Autumn of 1809 in Geo Wilson.

- The ~~last~~ ~~was~~ had long been
afflicted with the nervous predisposition.

- His disease assumed all the symptoms
of Hydrophobia except the dread of water,
which is frequently absent in it. His
pulse was active. I bled & purged, &
blistered him & thus cured him in
a few days. -

The Amenorrhagic state of fever. This
 disease ~~is~~ ~~disease of women~~. will be taken no-
 -tice of when we come to treat upon the
 diseases of women.

^{two}
Dr. Hunter says it often accompanies the
bilious fevers of Jamaica. Mr. and ^W Elliot
informed me he had seen it ~~affected~~ ^{in a}
whole Company of Surveyors ~~in the~~ who
were affected with the malarial fever.
I have seen it several times in this city.

~~Even ^{Epilepsy} ~~the~~ is ~~at~~ sometimes a~~
~~symptom of fever. according to Abibert. ^{Dr} ~~the~~ ^{the latter}~~
~~attended yellow fever in 1793 & a case of ~~pyrexia~~ ^{fever}~~
~~which ended in ~~hydrocephalus~~ ^{internus} under the~~
~~care of the late Dr Carson - that is ~~Gravels~~ a~~
higher & more permanent grade of Con-
vulsions. - Wepfer describes an epidemic
fever in Germany in 1693 in which
convulsions were a general symptom. It
was but once he had grain.

Convulsive state of fever

Fever from all their causes are sometimes thrown upon the muscles, and bring on general or partial convulsions. Children are most subject to them. But they occur in Adults in malarial fever.

The Tetanus is sometimes a symptom of fever. ~~Mr. Elliott & Dr. Hauck's facts.~~ These convulsions are now & then excited by the action of the patient. as in Capt. Taylor, & by touch - & speech, as in the girl in the yellow fever.

Remedies

1st. ~~opium~~ and all the remedies ^{ch} are indicated by the fever of which these convulsions are symptoms, with the addition of such as act more immediately upon the muscular system such as Oil of Amber - Asafetida &c

+ Dr. Sydenham & Dr. Willis describe a fever in
1875 which was attended with hypochondriac
Symptoms.

the Hippocri: ^{fever} Plate of, in a young man
V I had a remarkable case of ~~it~~ ^{it} ~~in the~~
^{in the} last year 1808 under my care. This
Deathphobia ~~was~~ accompanied the typhus
or Chronic fever of the season under w:
he laboured. He spoke of nothing but
dying every time I visited him, and
often fixed upon the precise hour on
which he was to die. His countenance
indicated the deepest distress & ~~often~~
honor. Bark - wine & ^{the hope w:} Volatiles ~~was~~
all which I took pains to inspire him,
overcome ~~but~~ his ~~disorder~~ ^{disorder} & his fear
of death. ~~When he~~ ^{but} ~~this~~ dread of death
~~however~~ continued After his fever had
was but ~~the~~ ^{the} last grain.

The Hysterical & Hypochondriacal
States of fever.

Symptoms of both these States of the
Nervous System often combine in fevers.
In the Hypochond^{ic} - the brain is affected,
and the patient labours under a con-
-stant death phobia. In the hysterical
State of fever, there is a disposition to shed
tears - with pale Urine - Globus and
Clavis hysterica⁺. They are troublesome
cases, & require great attentionⁱⁿ management.
The ~~best~~ Remedies for these States
of fever should be the same as for the
fever ^{with} ~~to~~ which these symptoms blend
themselves. The Palliative med^y may
be given for them to please our pa-
-tients.

Hysterical Symptoms when blended
with fever - go to p. opposite 25. ©

in part left him. In this situation of
his system I changed my conduct to-
wards him. Upon asking him ^{one} ~~my~~
first day how he was (having previously
found his pulse ~~exceedingly~~ ^{exceedingly} ~~enough improved~~ ^{enough improved}) he
answered "very bad," & added that he
was sure he should die." I said I was
sorry for it, - and then ^{without} ~~in~~ after ~~express-~~
~~ly~~ ^{literally} ~~asked him~~ ^{asked him} - what ~~but~~ whether
I should send a joiner to him to measure
him for his coffin! This question ^{excited} ~~instantly~~
new emotions in him - he ~~dismissed his~~
~~face~~ ^{from} ~~from that time~~ ^{he} ~~recovered~~ ^{recovered}, without =

✓ Cutaneous diseases are common travellers
tell us in Egypt. They ^{are} probably a translation
of the plague to the skin.

= mentioning his dread of death to me
in any of my subsequent visits to
him.

~~Hysterical symptoms when bled~~

was but the last bad gain.

The Anterior state of fever

In this case, the fever is supported in the skin.

They are distinguished from the ^{common} ~~fevers~~ ^{fevers} by the fever on the skin being in a suffocated state - & hence they are easily ^{attended} with ^{or} thirst, quick pulse. I have supposed the dysentery to be an ^{chronic} extravasated fever. It arises from all the causes of ^{or malignant} ~~Antennal~~ fevers. It is less declined in Europe with those fevers. The prickly heat is a substitute for Yellow fever in the West Indies according to Dr Hillary. None have it in whom this eruption continues during a sickly season. The Tania Capitis and many other local eruptions often alternate with fever. The state of the

② Should not reduce us from
with fever ~~require great judgment to~~
attending chiefly to the fever. ^{The fever} It may be
known by the pulse - has an Urgeing
Epidemic. I was once called to a lady
in consultation ^{with a physician of}
in this city who for the first attack of
the ^{the} yellow fever had some trifling hysterical
symptoms. She was taking ^{nothing but} Sassaaparilla.
- I advised leaving ^{it} ^{the use of} off & of course,
- she by the use of which (the former 13
times) she was cured of a feverish
attack of yellow fever. Her first physician
could not believe her disease was yellow
fever, because she had not been on
board of a ship, nor near any person
ill with the yellow fever.

was left over as was 42 acres

blood vessels should never be overlooked
in prescribing for them.

The Remedies should be
1. ⁺Res. 2. sponges - 3. meats - 4. low or full diet
according to the state of the system.
+ I mentioned a fact from Dr. Thury of ^{St.} in
the bleeding piles preventing the leprosy ~~the~~
Astruc. This shows the connection between
diseases of the skin & blood letting.
